

## VB & EVB drum tipper

### general features

The VB series drum tippers are designed for the ergonomic lifting and tipping of drums or barrels up to 200 kg, with minimal handling effort by the operators.

We offer two models of drum tippers:

- » **VB tippers:** designed exclusively for the tipping and/or transport of drums or barrels.
- » **EVB tippers:** with a hand-truck-type design that allows for lifting, transporting, and tipping the drum. These dumpers have a lifting column of up to 2,500 mm maximum and their design is similar to that of a pallet truck.

Both models can be supplied with electric or pneumatic drive and the clamping system can be either with a clamp or a pressure belt (depending on requirements), making them very versatile equipment suitable for working with different types of barrels or drums.

VB mobile drum tipper.

VB double-drum tipper, pneumatically operated. Suitable for 60 and 200 Kg barrels.

EVB mobile drum tipper.
